

3rd International Forum on High Energy Geophysics:
Muon and Neutrino Radiography
(March 9, 2010 Tokyo, Japan)

A SiPM based readout system: sensors and electronics

R. D'Alessandro
INFN and University, Firenze, Italy

The report will describe the SiPM hybrid which couples to 32 wavelength shifter fibres, and the Front End electronics used to amplify and digitise the signals. In particular a description will be given of the SPIROC chip and the way we have implemented some of its functions for our readout. This meeting was supported by the Earthquake Research Institute cooperative research program.
