Dear ERI Friends,

Working in ERI is one of the most memorized experiences to me! I'd like to thank Professor Kazushige Obara for giving me this opportunity to work with him. In the first month after I analyzed the seismic data and found new results, I finally realized how the intelligent scientists and high quality seismic data make ERI a high reputation academic institute! I also enjoy all other interesting things in Tokyo, such as the delicious Japanese foods, traditional festival, and friendly people! The most lucky thing happened on me is I got the JSPS fellowship, hence, I will still see you around in ERI for a while!!
