

**Report for “Development of an electric furnace measurement
technique with cosmic ray muons”**

Hiroyuki K. M. Tanaka^{1*}

**on behalf of the collaboration of Denki Kagaku Kogyo Kabushiki Kaisha
and University of Tokyo**

Earthquake Research Institute, the University of Tokyo, Japan¹

We collected muon data every 10 minutes in order to analyze the internal density distribution of an electric furnace for different operating conditions. Here we report the results for (a) different electric load conditions, (b) different electric resistance conditions, and (c) for different production efficiencies.
